

PATENT
450100-03403**IN THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1. (Currently Amended) A method of conducting a network auction comprising the steps of:

- displaying information pertaining to an auction exhibit item which is registered in a network auction server to a bidder client;
- recording an identification (ID) code of said bidder client when said bidder client requests a notification of the information pertaining to said auction exhibit item; and
- notifying an updated transaction price to the bidder client having said identification (ID) code automatically when a transaction price changes due to a bid submitted by another bidder client,

remotely updating the notification using an information image that is generated by said network auction server and downloaded by said bidder client.

2. (Currently Amended) A method of conducting a network auction comprising the steps of:

- creating an information image, which combines an image information pertaining to an auction exhibit item and a related information which establishes a communication with a network auction server via a manipulation of an operator in accordance with said image

PATENT
450100-03403

recording an identification (ID) code of said bidder client in the auction support server when a bidder client requests a notification of the information on said auction exhibit item after viewing the information image registered; and

notifying an updated transaction price from the network auction server to the auction support server, and automatically notifying said updated transaction price from the auction support server to said bidding client having said identification (ID) code when an transaction price changes in the network auction server due to a bid submitted by another bidder client,

wherein said notification is done through remote updating of an information image that is generated by said network auction server and downloaded by said bidder client.

4. (Currently Amended) A method of a network auction support comprising the steps of:

prompting a registration of information pertaining to an auction exhibit item to submit to a network auction server;

registering said information in said network auction server when said information is registered;

recording an identification (ID) code of said bidder client when a bidder client request a notification of the information pertaining to said auction exhibit item after viewing said registered information; and

notifying an updated transaction price automatically to the bidder client having said identification (ID) code registered when it is notified that a transaction price in the network auction server changed due to a bid submitted by another bidder client.

PATENT
450100-03403

wherein said notification is done through remote updating of an information image that is generated by said network auction server and downloaded by said bidder client.

5. (Currently Amended) A method of network auction support comprising the steps of:
prompting a registration of an image information pertaining to an auction exhibit item to submit to a network auction server;

creating an information image, which combines an image information pertaining to said auction exhibit item and a related information which establishes communication with a network auction server via manipulation of an operator in accordance with said image information as a single handling unit, when said image information is registered;

registering said information image in the network auction server;

recording an identification (ID) code of a bidder client when said bidder client requests a notification of the information pertaining to said auction exhibit item upon viewing said information image registered; and

notifying the bidder client corresponding to said identification code of an updated transaction price automatically when it is informed that a transaction price changes in the network auction server due to a bid submitted by another bidder client.

wherein said notification is done through remote updating of said information image that is generated by said network auction server and downloaded by said bidder client.
